

Practical Works 1 - Architecture & Modern Layout for E-Commerce :

(Tailwind v4 fix)

1. **Install the Vite Plugin:** In your project-store folder, run:

```
npm install @tailwindcss/vite
```

2. **Update vite.config.js:** Open vite.config.js (in your root folder) and add the Tailwind plugin:

```
import { defineConfig } from 'vite'
import react from '@vitejs/plugin-react'
import tailwindcss from '@tailwindcss/vite'

export default defineConfig({
  plugins: [
    react(),
    tailwindcss(),
  ],
})
```

3. **Update src/index.css:** Delete everything and use the new v4 import instead of the three @tailwind lines:

```
@import "tailwindcss";
```

Note: In v4, you do not need to manually list your files in a content array ; it detects them automatically.
